Clean the Mouth Prop Before Use - The Open Wide® Re-Usable Mouth Prop is not sterile when packaged. It can be sterilized with steam-heat (autoclaved). Maximum temperature is 285 degrees Fahrenheit. Follow instructions provided by the autoclave manufacturer regarding time required for proper asepsis.

The Open Wide® Re-Usable mouth prop comes in sizes small, medium and large. Our customers have told us that the mouth prop is most effective when the largest size that is comfortable for the patient is used.

Optional Use of Saliva Ejector for Dental Applications:
Insert the tail end of the saliva ejector (the end that connects to the suction device) into the hole at the front (tapered end) of the wedge-shaped portion of the mouth prop, as shown. Push the saliva ejector through the hole until it exits at the handle end of the prop. Connect to your suction device. Adjust the tip (mouth end) of the saliva ejector for desired placement.

Insert the tail end of the saliva ejector into the hole at the tapered end of the prop.

Floss may be tied through the hole of the tab handle for retrieval if necessary.
